

## SECTIONALISED SAFE

---

### KEY FEATURES

- » Rapid deposit and collection
- » Anti raid protection
- » CIT approved
- » High security, high quality
- » Low weight

# SECTIONALISED SAFE

The Scotia Sectionalised Safe facilitates the secure deposit and collection of remittances by CIT and bank staff.

The unit has a controlled lower safe section accessed by a highly secure drawer for cash deposits and time delayed door for general entry.

The upper section has an external safe door which allows access to configurable multiple inner doors which can only be opened one at a time providing protection against raids.

The safes are certified to the latest ECB European CEN standards and are highly resistant to attack. They incorporate the latest low weight composite barrier materials allowing for placement even under the most challenging floor load restrictions. The impressively compact dimensions ensure maximum use of space with minimal disruption.

High-security electromechanical locks deliver class leading protection levels »
