

WEIGHTEDPLINTH

KEY FEATURES

- » Dramatically improves freestanding ATM security
- » Rapid installation
- » Visual deterrent
- » Concealed chain fixing option

WEIGHTED PLINTH

The DS68 ATM Weighted Plinth provides a rapid security upgrade to freestanding ATMs, increasing the defence against forced removal and ram raid attack.

Particularly beneficial to freestanding ATMs located in public space, the unit offers a bold visual indicator of the level of defence it provides, deterring wouldbe attackers.

The panels are fitted with barrier materials that not only add weight and shock-absorption to the unit, but also provide defence against cutting and drilling attack.

For ultra-high risk sites, there is the option for a secondary door fitted with mechanical or electronic locking.

Can be securely attached to the floor using our anti-ram raid chain fixing kit »

KEY FEATURES

- » High resistance to forced removals
- » Protects against side attacks
- » Fits majority of freestanding ATM models
- » Installed rapidly in one visit
- » Provide bolt-free option where floor type prohibits drilling
- » Additional wall fixing points as standard
- » No obstructions to access points i.e. Key, hood, air vents or the hole at the rear
- » No impact on ATM service levels
- » Chain fixing option
